INTRODUCTION

This new edition of *Who's Who in Communist China* is an important basic reference work on Communist China, of great value to scholars, journalists, and others concerned with Chinese affairs.

Double the size of the first edition, this revised edition contains a total over 3,000 biographical sketches. These include not only top party, government, and military leaders but also a wide variety of other types of men and women who play key roles in state and society in Communist China: administrators, economic planners, legal and security personnel, professors, artists and writers, diplomats, leaders of youth, women, and labor organizations, minority and religious leaders, and many others.

All those who have engaged in serious scholarly research or reporting on contemporary China will appreciate the enormous amount of labor required to piece together a handbook of this sort. Information on leading personalities in Communist China is generally scattered and fragmentary, and often contradictory; compiling detailed and accurate summaries of biographical data is by no means, therefore, a simple task.

The usefulness of biographical information is particularly great for the study of closed, totalitarian societies such as Communist China. There are many important questions about such societies that are extremely difficult to research because of the lack of readily available data, and biographical information, even when not extensive, often provides the best — and in some cases almost the only — raw material for analysis which can throw some light on them.

Careful study of biographical data obviously provides essential information for an understanding of the nature of leadership — including the social characteristics, career histories, and so on of the top leaders. In addition, however, it can also throw important light on evolving power relationships in the system, changes in organizational structure, and shifts in policy.

A thorough knowledge of the backgrounds of the personalities involved contributes substantially, in fact, to one's understanding of almost all important political developments in China. It is particularly important now, because of the many shifts in leadership resulting from the Great Proletarian Cultural Revolution.

This volume provides, therefore, not only a valuable reference book containing basic information on particular leaders in Communist China but also an important source of material for the study of many broad questions, both historical and contemporary, relating to leadership and politics in China.
