

Using HP Reveal to embed AR into a textbook

Step 1:

Take a photograph from an image in the book that you would like to use as a ***‘trigger’***

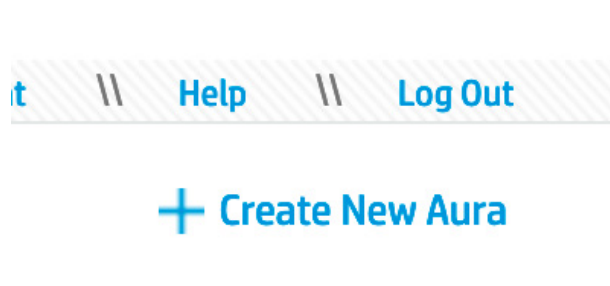

Step 2:

Create or source a media file that you would like to use as the AR ***‘overlay’***.

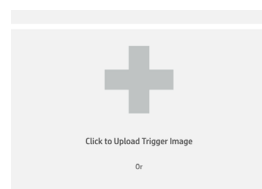

Step 3:

Log in to the HP Reveal interface and click the Create New Aura button

Step 4:

Click the giant plus sign that says ***‘Click to Upload Trigger Image’***.

From this window you will name the trigger and select an image from your hard drive by clicking the **'Browse'** button.

Step 5:

Now you'll need to select the media file that you'll want to use as the AR **'Overlay'**. To do so, click the 'Next' button in the upper right-hand corner of the interface.

Step 6:

Click the giant plus sign that says **'Click to Upload Overlay'**. From this window you will give the overlay a name, select the media type you are using, and then click the browse button to find the media file on your hard drive.

Step 7:

Once your media file is done uploading you can resize the overlay to fit over the trigger image and click the **'Next'** button.

Step 8:

Give your Aura a unique name to make it discoverable from within the HP Reveal iOS and Android apps.

Click the **'Save'** button and you're done.
